The invention relates to a novel method for identifying, isolating and producing hyperimmune serum-reactive antigens from a pathogen, tumour, allergen, a tissue or host prone to auto-immunity, where the antigens are used in a vaccine, comprises providing antibody preparation from a plasma cool of a type of animal, or individual sera with antibodies against the pool of a type of animal, or individual sera with antibodies against the specific pathogen, tumour, allergen, tissue or host prone to auto-immunity. The hyperimmune serum-reactive antigens comprising any of the immunity. The hyperimmune fragments are useful for the manufacture of a pharmaceutical preparation, particularly a vaccine against staphylococcal infections or colonisation against S. aureus or S. epidermidis. The preparation of antibodies is useful for the manufacture of a medicament or against S. epidermidis. The antibody preparations may also against S. aureus or S. epidermidis. The antibody preparations may also consist in the specific antiposes. Other conditions that can be treated include cancer, autoimmune diseases or infections caused by viral (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This continue for identifying and producing pathogen specific antigens of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       622
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      386

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents Staphylococcus aureus cbrA DNA. The cbrA protein is predicted to have a molecular weight of about 36.8 kD and, along with cbrB day423313 and cbrB. (A7442333), is thought to be involved in iron regulation, based on amino acid sequence homology with known iron regulations in burns, callulitis, eyelid infections which causes infections in burns, callulitis, eyelid infections, book poisoning, joint infections in neonatal conjunctivitis, eyelid infections, skin infections, infections, neonatal conjunctivitis, eyelid infections, skin infections, cargical wound infection, scalded skin syndrome and toxic shock syndrome. Staureus is increasingly becoming resistant to known antibiotics, with mathy strains generally being multiply drug resistant. Methicillin-resistant strains generally being multiply drug resistant. Methicillin-resistant serious infection control cantibiotics with many strains being multiresistant against virtually all antibiotics with the exception of the vancomption-type glycopeptide antibiotics. The protein may be useful to screen potential antagonists which could be used as antibiotics and it may be used as a vaccine to prevent or attenuate an infection caused by a member of the control caused the protein, or antibodies against it can be used in immunoassays to detect Staphylococcus in a biological sample. (ATCC 202108) genomic DNA including the novel cbrA gene that codes for a 30-amino acid protein (see AAY18124) of predicted mol. wt. 36.8 kDa. The gequence was obtained from overlapping clones BTACA44 and BTAGA54, which span a single operon containing the cbrA, cbrB and cbrC genes (see AAI1889-91). CbrA shows sequence homology to known genes involved in circum regulation. The invention provides 11 novel genes (see AAX1887-92) of S. aureus and the polypeptides they encode (see AAY1817-27). Also provided are vectors, host cells, antibodies and hybridomas. The and antagonists of S. aureus polypeptide activity, and to diagnostic methods for detecting Staphylococcus nucleic acids, polypeptides and antibodies in a biological sample. Antagonists of cbrA may be useful as antibiotics to treat infections of S. aureus and other Staphylococcus spp. Also provided are novel vaccines for the prevention or attenuation of useful for generating probes and primers, and in the recombinant constraint constraints.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 147 AGGIACTACGAAAGTACCTAAACACCCTAAACGTGTTGTTGTTCTTGAGTATTCATTTGT 206

                                                                                                                                                                                                                                                                                                                    The invention describes a new isolated nucleic acid molecule comprising:
a sequence that is 95% identical to a fully defined sequence having 586-
2226 bp, or its complement; or a sequence encoding a polypeptide having a
fully defined sequence comprising 136-691 amino acids, or its complement.
The gene is Staphylococcus aureus gene. The nucleic acid is useful for preparing a vaccine against infection caused by Staphylococcus aureus.
The methods are useful for preventing or attenuating an infection caused by a Staphylococcus, detecting Staphylococcus aucleic acids in a biological sample obtained from an animal, and detecting Staphylococcus antibodies in a biological sample obtained from an animal. This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        138 GGGTACAACTGAAATTAAAGGGAAACCAAAGCGTGTTGTTACGCTATATCAAGGTGCCAC 197

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is that of DNA encoding novel Staphylococcus aureus surface-exposed immunogenic polypeptide (SEIP) D2 SAO2. To isolate SEIP genes, an expression library of S. aureus genomic DNA was screened with anti-SEIP antisers. DNA was isolated from clones expressing SEIPs, and amino acid sequences were deduced and analysed for conserved and/or functional domains. The SEIP encoded by the present DNA sequence has sequence homology with the siderophore family of periplasmic binding proteins. The invention provides methods for the identification, production and recovery of SEIPs. The SEIPs can be used individually, or problination, to produce anti-staphylococcal antibodies useful in passive or active immunisation strategies to prevent or contain staphylococcal infection. They can also be used to develop diagnostic asseays

of the invention. The DNA sequence are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM, Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The polypeptides can also be used in a kit for the immunodetection of solvential and surgical wound infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating homologues of any of the S.aureus DNA sequences contained on the computer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  119

The invention relates to an isolated nucleic acid comprising any one of the foll antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid nucleic acid (2) a host cell containing the vector; (3) an isolated cupleptide acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding cell polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or the biological pathway in which a proliferation-required gene or the biological pathway in which a proliferation-required gene or the biological companion acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the straint compound that inhibits proliferation of an organism. The antisense nucleic acids are useful for the admitifying proteins or screening for homologous nucleic acids are useful for for diagrams or the proliferation of an organism. The antisense nucleic acids are useful for for diagrams and diagrams and diagrams and diagrams or for a diagram or for a diagram or for an expensive and diagrams or for a diagram or for an expensive and diagrams or for a diagram or for an expensive and diagrams. The antisense nucleic acids are useful for for a diagram or diagram or for an expensive or confidence or confidence or diagrams.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              prokaryotic essential genes. Note: The sequence is one of the target not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 430

A composition comprising the S. aureus protein, a mutileic acid encoding the protein, or an antibody to the protein, is useful as a pharmaceutical, particularly as a vaccine for treating or preventing infection due to Staphylococcus bacteria, specifically an infection caused by S. aureus. The composition is particularly useful for treating or preventing sepsis in a patient. The composition can also be used for diagnostics. The protein is also used in an assay for enzymatic studies and as a target for antibiotics. This sequence represents one of

and (II), given in AGGB1454 to AAGB3120, from Staphylococcus epidermidis.

and (II) can have antibacterial activity and therefore can be used in vacadination. The nucleic acids (I) was be used to produce the S. epidermidis polypeptides (II) via the production of vectors containing them which are used to produce hosts cells which express the polypeptides. The polypeptides (II) fand/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their creatment of S. epidermidis processed to assay for other inhibitors of their treatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to AAH55090 represent specifically claimed S. epidermidis genomic DNA polymucleotide sequences and primers which are used in the exemplification of the present invention. ó,

The invention relates to an isolated nucleic acid comprising any one of
the 6213 antisense sequences given in the specification where expression
of the nucleic acid inhibits proliferation of a cell. Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid
encoding a polypeptide whose expression is inhibited by the antisense
of uncleic acid; (2) a host cell containing the vector; (3) an isolated
contypeptide or its fragment whose expression is inhibited by the
antisense nucleic acid; (4) an antibody capable of specifically binding
contypeptide; (5) producing the polypeptide; (6) inhibiting cellular
contiferation or the activity of a gene in an operon required for
proliferation or the activity of a gene in an operon required for
contiferation or that has an activity against a biological pathway
required for proliferation, or that inhibits cellular proliferation; (8)
identifying a gene required for cellular proliferation or the biological
contiferation or which the test compound that inhibits proliferation of an
organism acts; (9) manufacturing an antibiotic; (10) profiling a
compound's activity; (11) a culture comprising strains in which the extent
compound's activity; (11) a culture comprising strains in which the
compound's activity; (11) a culture comprising strains in which the
compound's activity; (11) a culture comprising strains in which the
compound's activity; (11) a culture comprising strains in which the
compound's activity; (11) a culture comprising strains in which the
compound's activity; (11) a culture comprising strains in which the
compound's activity; (11) a culture comprising strains in which the
compound's activity; (11) a culture comprising experiment of an organism. The antisense nucleic acids are useful for
contiferation of an organism. The antisense nucleic acids are useful for
contiferation are screening for homologous nucleic acids are useful for
contiferation are proliferation to isolate candidate molecules for rational 316 193 436 137 AGCACGAAGAAGGTACTACGAAAGTACCTAAACACCCTAAACGTGTTGTTGTTGTTGAGT 196 376 254 GAÁCGCGCGCGCAGCCGAGCCTGGAAGCCATTGCTGCCCTGAAACCAGACCTGATCATTG 313 AACTGAAAAGTTTCGATGGAGATTATAATGAAAATATTGATGCTTTTAAAACAATTTCAA 496 433 AAGCTTTAGGTAAAGAAGAAGGTAAAAAACGCTTAGAAGAACACGATAAGAAAATTG 556 aagrogradgraaaaacgagagargcaggcgcgcrcrggaacaacaraaaagagaagargg 493 drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences 74 accaccaaccaccaccactracactrcarraaaccccacaaccaccacaaccacaac 194 Accangcada a confector con a defector con a confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector de confector CTGATAATAATAGACACAAAGGTATTTATAAAGACTTAAATTAAAATTGCTCCTACGATTG 197 ATTCATTTGTTGATGCGTTAGTTGCTTTAGATGTTAAACCTGTTGGGATAGCGGATGATA 134 TCTCGTTCGCCCGATGCGCTGGCCGCCGTGGACGTCAGCCCCGATCGGTATTGCCGACGATA 257 ACAAAAAAATCGTATTATTAAACCATTAAGAGATAAAATTGGAAAATACACTTCTGTAG GAACACGTAAGCAACCTAACTTAGAAGAAATCAGTAAACTTAAAACCAGATTTAATTATTG 374 ISCITIAAGICCCGCAACGAAACCIACGCIGAAAITIIGCACICAGCGGCIAICAICGGCG Gaps New antisense nucleic acids, useful for identifying proteins or scre for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs. ö Length 900; Sequence 900 BP; 198 A; 266 C; 256 G; 180 T; 0 U; 0 Other; Indels 10.2%; Score 103.2; DB 8; 52.9%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to the isolation of genes and their encoded proteins from Photorhabdus luminescens. The isolated sequences are sources of probes and primers for detecting the genem of P. luminescens and related species; to study polymorphisms; for gene analysis and for detection/amplification of the genes. Antibodies (Ab) raised against the polypeptides encoded by the genes are used for detection/identification of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that animals or microorganisms other than P. luminescens and are able to alter response or sensitivity to toxins and antibiotics produced by P. luminescens. Cells transformed to express the genes are useful for recombinant production of the proteins, particularly toxins and antibacterials useful as insecticides, bactericides and fungicides. The genes, proteins, vectors containing the genes and Ab are also useful the responticially (to treat microbial infection by bacteria or fungi that the properticials to P. luminescens encoded toxins or antibiotics) and as biopsesticides. Other uses of the genes and the proteins are as virulence factors and for identifying targets of human diseases for which P.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      8258
The invention comprises the amino acid and coding sequences of proteins from Photorhabdus luminescens which are active against insects. The proteins of the invention are toxic to Lepidoptera, specifically the genera Plutella, Heliothis, Heliotoverpa, Spodoptera and Ostrinia. The DNA and protein sequences of the invention are useful in the preparation of transgenic, insect resistant plants, specifically wheat and maize. The present Photorhabdus luminescens genomic DNA contains the coding sequence for the two insecticide proteins of the invention.

- Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and mamnoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP's pl and BST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPRC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

ABRC Stock Number CS642250; T-DNA left border flanking sequences of Syngenta Arabidopsis Insertion Library (SAIL) lines are available through the Arabidopsis Bloological Resource Center (ABRC).
Sequences represent a pool of amplified genomic regions and not single contiguous sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SAIL_1148_D03.v1 SAIL Collection Arabidopsis thaliana genomic clone SAIL_1148_D03.v1, genomic survey sequence.

- Obtermination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruiffly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutcyo Gosegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial Ecorganic strain of Drosophila DNA provided by the BDGP from the isogenic strain of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pland EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                             1101 bp DNA linear GSS 03-JUN-1999 Drosophila melanogaster genome survey sequence TET3 end of BAC: BACR35W04 of RPCI-98 library from Drosophila melanogaster (fruit Lly), genomic survey sequence.

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.wt - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billand at CEPH (Centre d'Ettude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      239 ITGGGATAGCGGATGATAACAAAAAAATCGTATTATTAAACCATTAAGAGATAAAATTG 298
